RESEARCH OBJECTIVE

My research aims to make robot foundation models (RFMs) safe and reliable by turning their failures/anomalies into a learning signal. I develop methods that discover interpretable failure modes from deployment data, monitor reasoning-action misalignments at runtime, and steer them toward safe, successful task execution at test time with minimal human supervision. Going forward, I aim to build safety-reasoning models that generalize across tasks and embodiments, enabling RFMs to monitor and correct their behavior, and explore post-training RFMs with reinforcement learning using dense failure signals.

EDUCATION

- **Stanford University** Stanford, CA
Ph.D. in Aeronautics and Astronautics; Advisor: Somil Bansal *Jan 2025 – Present*
- **Stanford University** Stanford, CA
M.S. in Aeronautics and Astronautics; Advisor: Somil Bansal *Jan 2025 – Dec 2026 (Exp.)*
- **Indian Institute of Technology (BHU)** Varanasi, India
B.Tech. in Electronics Engineering; Advisor: Om Jee Pandey *Nov 2020 – May 2024*

EXPERIENCE

- **Safe and Intelligent Autonomy Lab** Stanford, CA
Graduate Student | Prof. Somil Bansal *Aug 2024 - Present*
 - **Research Area:** Policy Steering, Runtime Failure Monitoring, Failure-Guided Policy Improvement.
 - Designed test-time monitors that flag VLA reasoning-action misalignment and steer towards visually accurate chain-of-thought and actions, improving its performance, reliability, and human interpretability.
 - Developed an unsupervised multimodal-LLM pipeline that discovers interpretable failure taxonomies from deployment logs, enabling targeted policy improvement and runtime failure monitoring.
 - Designed Q-guided safety filtering for high-speed systems, such as F1-Tenth cars and drones operating under visuomotor policies, solely through perception inputs without privileged information.

- Honda Research Institute - USA** San Jose, CA
Research Internship *June 2026 - Sept 2026*
 - Developed test-time policy steering methods improving reliability and robustness of generative flow-matching policies for dexterous manipulation tasks.
 - Achieved substantial improvements over strong baselines under nominal and perturbed dynamics.
 - Demonstrated zero-shot sim-to-real transfer on real-world dexterous manipulation tasks.
- University of Southern California** Los Angeles, CA
Research Internship | Prof. Somil Bansal *May 2023 - Aug 2024*
 - Goal:** Provide safety guarantees on vision-based controllers leveraging knowledge of their failures.
 - Mined failure modes of an aircraft taxiing system by computing Neural Reachable Tubes (NRTs).
 - Developed a runtime vision-based failure monitor and fallback mechanisms, reducing failures by 42%.
 - Fine-tuned policy on augmented failure dataset, reducing failures by 20% and prediction error by 10%.
 - Applied Conformal Prediction for probabilistic safety guarantees enabling deployment under uncertainty.
- Carleton University** Ottawa, Canada
Research Internship | Prof. Hashim Mohamed *Jan 2023 - Dec 2023*
 - Goal:** Develop docking mechanism for VTOL-UAVs on offshore charging platforms using Deep-RL.
 - Built a custom environment for UAV landing with JONSWAP model-based hydrodynamic disturbances (waves) acting on the docking station, making it oscillate on the water surface.
 - Implemented DQN and PPO algorithms to compare performance among value and policy-based agents.
 - Agents successfully learnt to land precisely and safely through a carefully designed reward function.
- Indian Institute of Science** Bengaluru, India
Research Internship | Prof. Bharadwaj Amrutur *May 2022 - July 2022*
 - Goal:** Develop centralized multi-agent exploration and vision-aided dynamic collision avoidance systems.
 - Implemented RRT-exploration algorithm and map merging on a multi-robot fleet for collective SLAM.
 - Performed real-time map updates, detecting obstacles with 3D Object Detection through infrastructure cameras and using Gradient Descent to optimize obstacles' 3D real-world position for avoidance.
 - Developed ROS packages that can be configured and implemented on custom hardware testbeds.

SELECTED ACHIEVEMENTS

• Qualcomm Innovation Fellowship – among 16 selected teams out of 400+ applicants	2026
• Annenberg Scholarship, University of Southern California	2024
• Best Paper Award – IEEE Advanced Networks and Telecommunication Systems	2024
• Best Undergraduate Thesis – among 146 students in ECE IIT BHU	2024
• IUSSTF-Viterbi Scholarship – among top 15 students selected across India	2023
• DAAD-WISE Scholarship	2023
• Mitacs GRI Scholarship	2023
• Felicitation by IIT BHU for technical contributions, leadership, and mentorship to fellow students	2023
• 2nd Position – across India in All IITs Robotics Association Challenge	2021

RELEVANT COURSEWORK

- Graduate Courses**
